

PRINCIPALLATCH

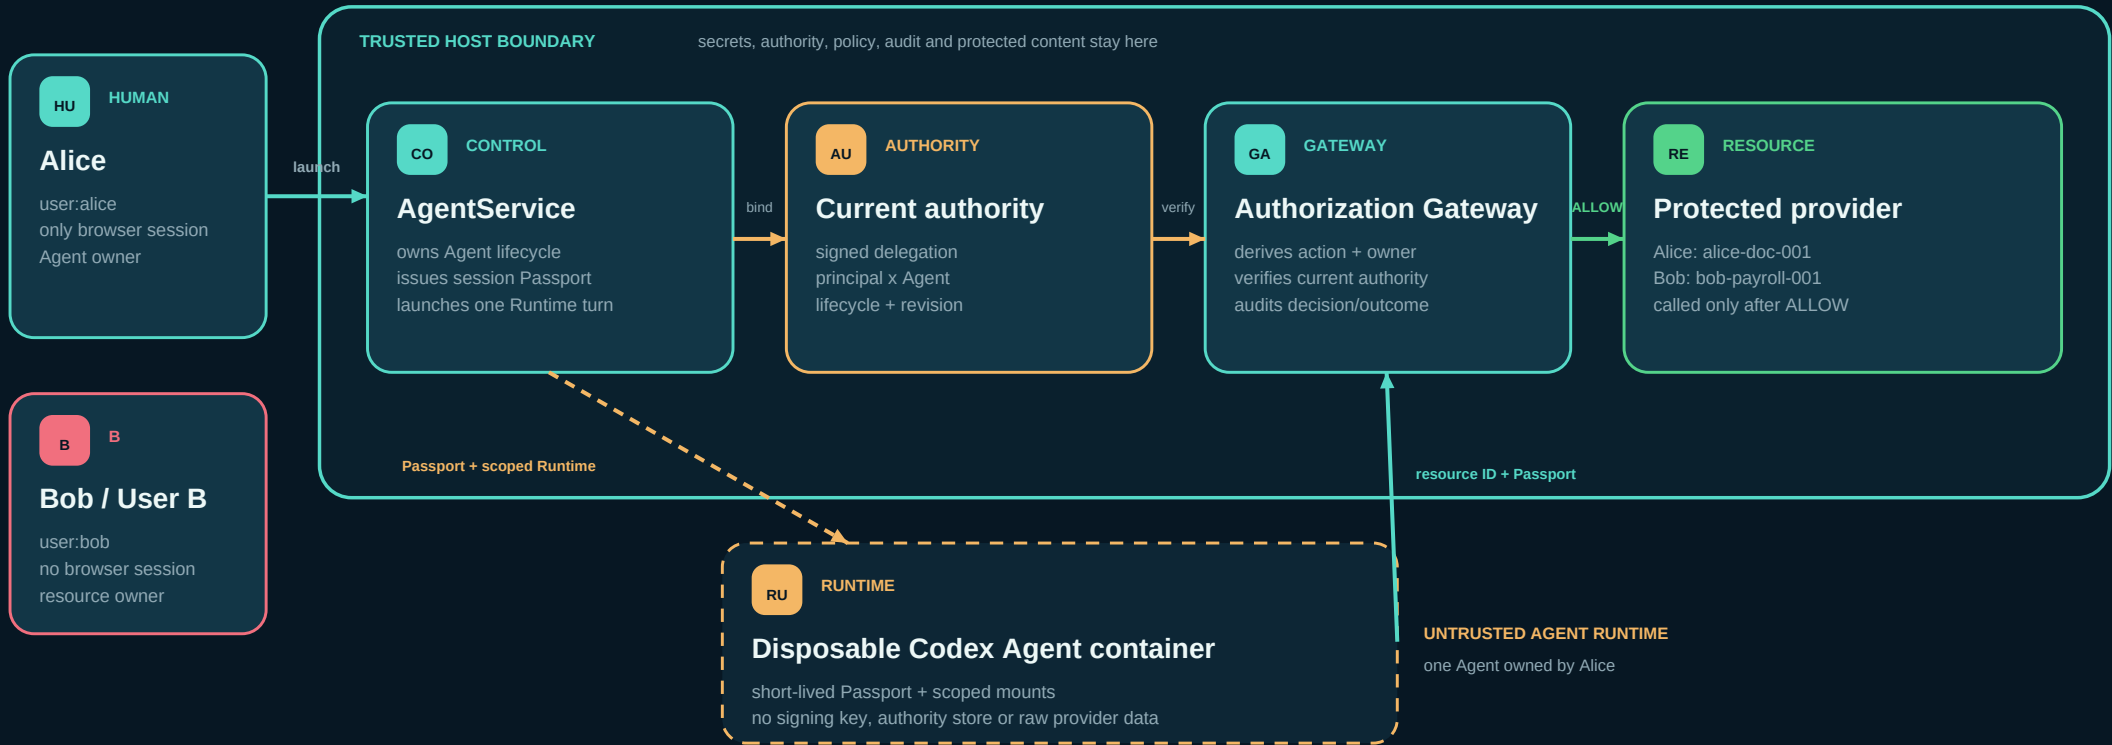

Verifiable Agent delegation and resource enforcement

TIKTOK TECHJAM 2026 | TRACK 1: BOUNCER

BACKEND ENFORCED

REVOCABLE

FAIL CLOSED

AUDIT CONTRACT

human | Agent | action | resource | decision | outcome | providerReadCount

raw Passport and secrets never reach browser evidence

JUDGE PROOF SEQUENCE

1 Alice delegates

Agent principal is owned by user:alice; one short-lived Passport is issued.

BOUND HUMAN x AGENT

2 Positive + negative

Same Agent reads Alice, then attempts Bob without changing identity.

ALLOW ALICE | DENY BOB

3 Backend proves denial

Bob provider is never called; decision and not_attempted outcome are audited.

BOB PROVIDER READS = 0

4 Live revocation

Alice revokes the Mandate; the same unexpired Passport loses authority.

DENY_MANDATE_LIFECYCLE

Official core: Alice/User A owns one Agent; Bob/User B owns negative-control data; backend proves allow/deny + audit.

Runtime: real Codex CLI + Volcengine Ark in a disposable Docker/Podman container

Local judging path | npm run poc
